## Switching On the cooler

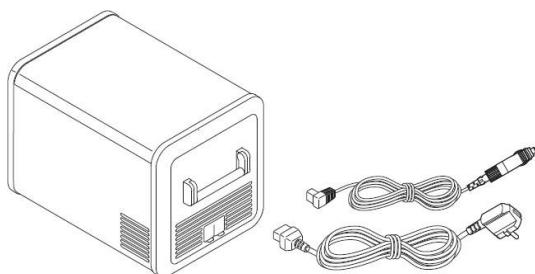

### Switching On and Off the CFX5 series coolers

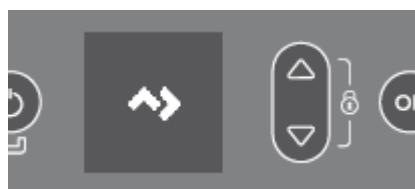

The procedure for switching the CFX5 coolers on and off can differ from the manual. When the cooler is turned On as described in the manual, it will not turn On in some cases.

Below are the steps to follow:

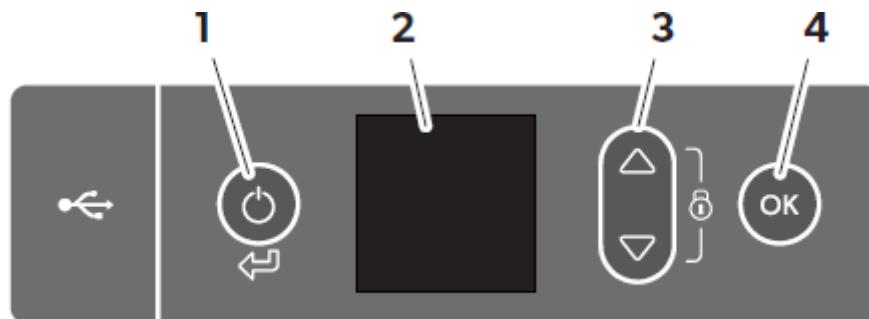

1. Connect the power cable (230 volts AC or 12/24 volts DC) to the cooler and plug it into the wall outlet:

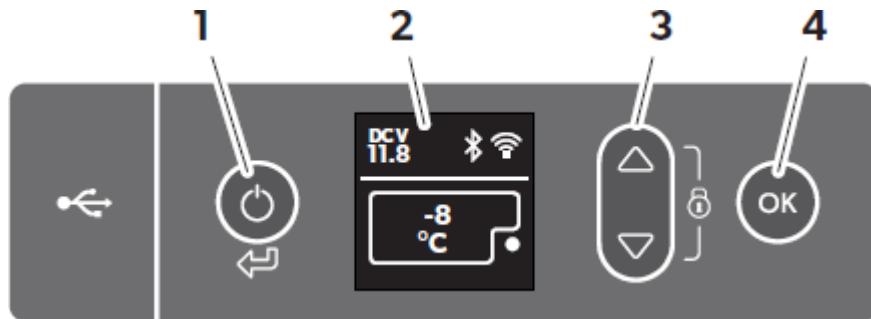

2. Wait for the Dometic logo to appear and disappear.

3. Press and hold the On/Off button (no. 1) for approx. 5 seconds and release it again.

4. Short press the On/Off button (No. 1) again to switch On the cooler. The display will turn on and show the current temperature in the cooler:

**⚠** The cooler can then be switched Off by pressing the On/Off button for about 3 seconds, and switched On again by briefly pressing the On/Off switch.

**⚠** When the cooler is disconnected from a power source, the above procedure must be followed again if the cooler does not start up automatically.
