DOMETIC CANTRAK DISPLAY

EN CANtrak Display Installation instructions

[REVISION C] Form No. 682202 | © 2023 Dometic

NOTE

This instruction covers the physical installation of the CANtrak display only. Connection and setup are covered in the installation manual included with your system.

WARNING!

Failure to adhere to the correct installation instructions included with your system may result in a loss of steering, which could lead to a collision and/or ejection from the boat, causing property damage, personal injury, and/or death.

Mount the display where it easily visible from the helm station. Consider the following:

- Mount the display vertically, or within 60 degrees of vertical. Do not mount it parallel to the deck unless the helm station is in an enclosed wheelhouse where no water can accumulate on the face of the display.
- Ensure adequate ventilation around the unit.
- Ensure you can get to the rear of the unit for harness connections.

See reverse side for additional instructions and installation template.

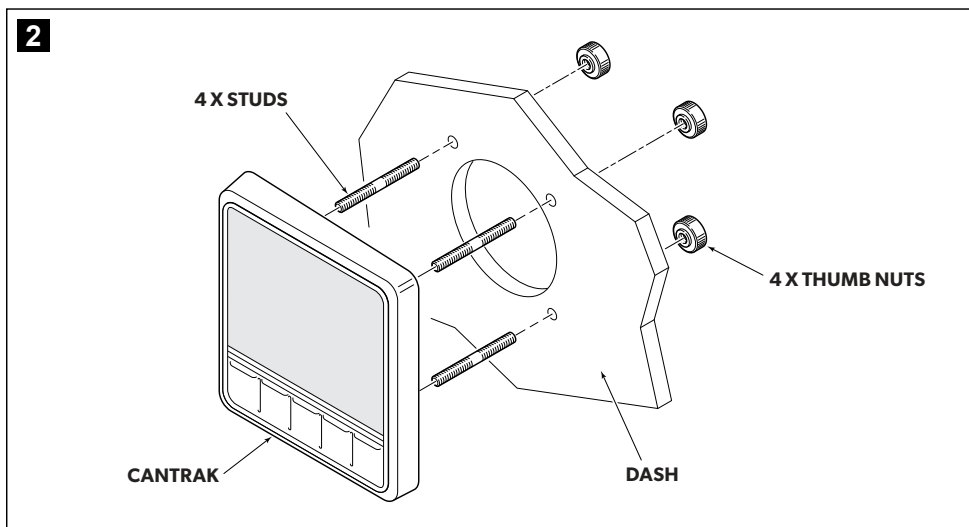

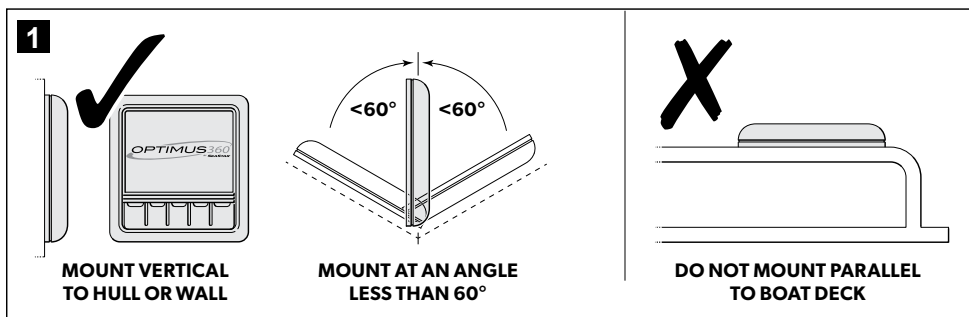

NOTE

- A CANtrak display is required at the main helm station but is optional at secondary control stations.
- A buzzer kit (HA5493) is required at any control station without a display.

Mounting instructions

- Use the template to mark the hole locations on the dash. Check that the template is square to the dash and other components.
- Drill the four mounting holes and cut the center clearance hole.
- Fully thread all four plastic mounting studs into the rear of the display.
- Install the display to the dash and hand-tighten all four thumb nuts. Do not use a tool.

NOTICE!

For connections and setup you must refer to the installation instructions shipped with your system. If you do not have the installation instructions, a replacement can be obtained by contacting Technical Support:

- Download at www.dometic.com
- Email: MarineTech@dometic.com
- Phone: 1.800.730.4082
